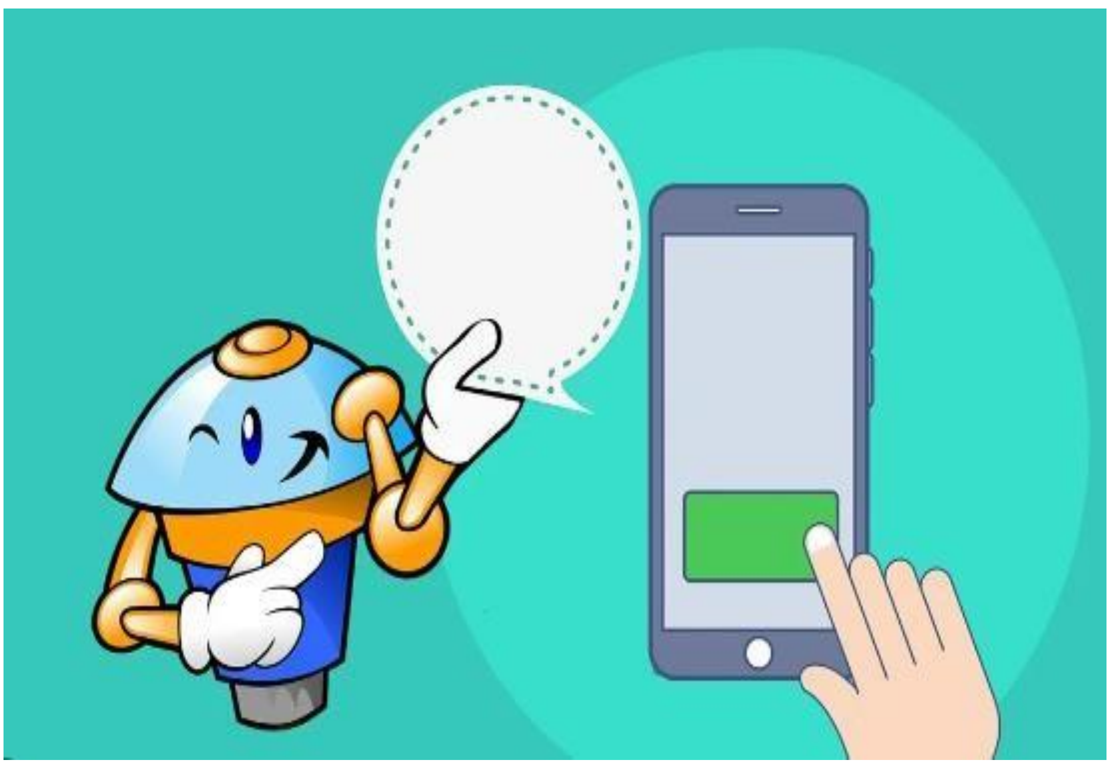
CREATE A CHATBOT IN PYTHON

Phase-3 submission document

Register Number : 963521104061

Name : Thanya S

Project title : Chatbot in python



Chatbot Using Python

Introduction:

Chatbots have become increasingly popular tools for automating customer interactions, providing support, and enhancing user experiences across various industries. Developing a chatbot using Python has become particularly accessible and efficient due to the rich ecosystem of libraries and frameworks available. In this project, we will explore the process of building a chatbot with a strong focus on data preparation and data preprocessing, which are critical steps in creating a chatbot that can understand and respond to user queries effectively.

Data preparation involves collecting and structuring the data that the chatbot will use for training and responses. Depending on the chatbot's purpose, data can come from various sources, such as text corpora, customer support tickets, or product manuals. Python offers powerful tools and libraries like Pandas and NumPy for data collection, cleaning, and formatting. We will delve into the best practices for sourcing and organizing the data to ensure it's ready for the next step.

This introduction will guide you through the key data preprocessing steps necessary to enable your chatbot to process and generate responses effectively, making it a valuable tool for various applications. Data preprocessing is the heart of chatbot development, as it involves transforming raw data into a format that the chatbot's model can understand. Natural Language Processing (NLP) libraries, including NLTK and spaCy, are indispensable for tasks like tokenization, stemming, and part-of-speech tagging.

Given data set:

```
hi, how are you doing?	i'm fine. how about yourself?
i'm fine. how about yourself?	i'm pretty good. thanks for asking.
i'm pretty good. thanks for asking.	no problem. so how have you been?
no problem. so how have you been?	i've been great. what about you?
i've been great. what about you?	i've been good. i'm in school right
now.
i've been good. i'm in school right now.	what school do you go to?
what school do you go to?	i go to pcc.
i go to pcc.	do you like it there?
do you like it there?	it's okay. it's a really big campus.
it's okay. it's a really big campus.	good luck with school.
good luck with school.	thank you very much.
how's it going?	i'm doing well. how about you?
i'm doing well. how about you?	never better, thanks.
never better, thanks.	so how have you been lately?
so how have you been lately?	i've actually been pretty good. you?
i've actually been pretty good. you?	i'm actually in school right now.
i'm actually in school right now.	which school do you attend?
which school do you attend?	i'm attending pcc right now.
i'm attending pcc right now.	are you enjoying it there?
are you enjoying it there?	it's not bad. there are a lot of people there.
it's not bad. there are a lot of people there.	good luck with that.
good luck with that.	thanks.
how are you doing today?	i'm doing great. what about you?
i'm doing great. what about you?	i'm absolutely lovely, thank you.
i'm absolutely lovely, thank you.	everything's been good with you?
everything's been good with you?	i haven't been better. how about
yourself?
i haven't been better. how about yourself?	i started school recently.
i started school recently.	where are you going to school?
where are you going to school?	i'm going to pcc.
i'm going to pcc.	how do you like it so far?
how do you like it so far?	i like it so far. my classes are pretty good
right now.
i like it so far. my classes are pretty good right now.	i wish you luck.
```

It consists of two columns: question \t answer \n . Suitable for simple chatbots. Contains 3725 items

Necessary steps to follow:

1.Import Libraries:

Start by importing necessary libraries:

Program:

In [1]:

```python
import tensorflow as tf
import numpy as np
```

```
 import pandas as pd ha
import matplotlib.pyplot as plt
import seaborn as sns from tensorflow.keras.layers
 import TextVectorization
import re,string from tensorflow.keras.layers
 import LSTM,Dense,Embedding,Dropout,LayerNormalization
```

2.Load the Dataset:

The below Python code is used to load data from a tab-separated values (TSV) file named "dialogs.txt" and store it in a pandas DataFrame.

Program:

In [2]:

```
df=pd.read_csv('/kaggle/input/simple-dialogs-
forchatbot/dialogs.txt',sep='\t',names=['question','answer']) print(f'Dataframe size:
{len(df)}') df.head()
Dataframe size: 3725
```

Out[2]:

	Question	answer
0	hi, how are you doing?	i'm fine. how about yourself?
1	i'm fine. how about yourself?	i'm pretty good. thanks for asking.

	Question	answer
2	i'm pretty good. thanks for asking.	no problem. so how have you been?
3	no problem. so how have you been?	i've been great. what about you?
4	i've been great. what about you?	i've been good. i'm in school right now.

3. Data Preprocessing

Loading and preprocessing of data are crucial steps in the development of a Python chatbot for several important reasons:

Data Quality and Consistency: Loading and preprocessing ensure that the input data, which could be in various formats, is standardized, cleaned, and structured appropriately. This leads to consistent and reliable input for the chatbot, reducing the risk of errors or misunderstandings during conversations.

Understanding User Input: Chatbots rely on Natural Language Processing (NLP) to understand and respond to user input. Preprocessing includes tokenization, which breaks down text into meaningful units like words or phrases. This helps the chatbot understand the user's message and extract relevant information.

Noise Reduction: In real-world scenarios, text data often contains noise in the form of typos, slang, abbreviations, or special characters. Preprocessing can involve tasks like spell-checking and removing special characters to ensure the chatbot can effectively interpret the user's intent.

4.Data Visualization

Data virtualization in a Python chatbot enables the bot to seamlessly gather and manipulate data from diverse sources, providing users with a unified and interactive data experience.

The following code is focused on data preprocessing and data visualization for a DataFrame called "df." It appears to be analyzing the distribution of token lengths in the 'question' and 'answer' columns of the DataFrame. Here's a breakdown of what this code does:

Program:

In [3]:

```
df['question tokens']=df['question'].apply(lambda x:len(x.split())) df['answer tokens']=df['answer'].apply(lambda x:len(x.split()))

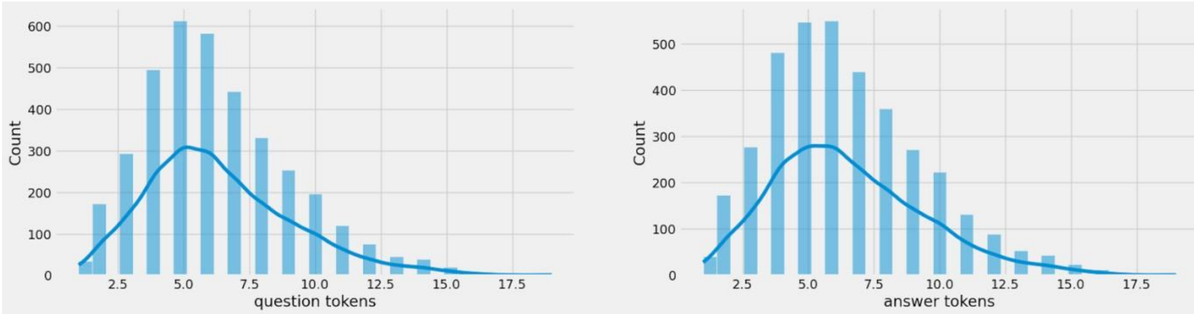
plt.style.use('fivethirtyeight') fig,ax=plt.subplots(nrows=1,ncols=2,figsize=(20,5))

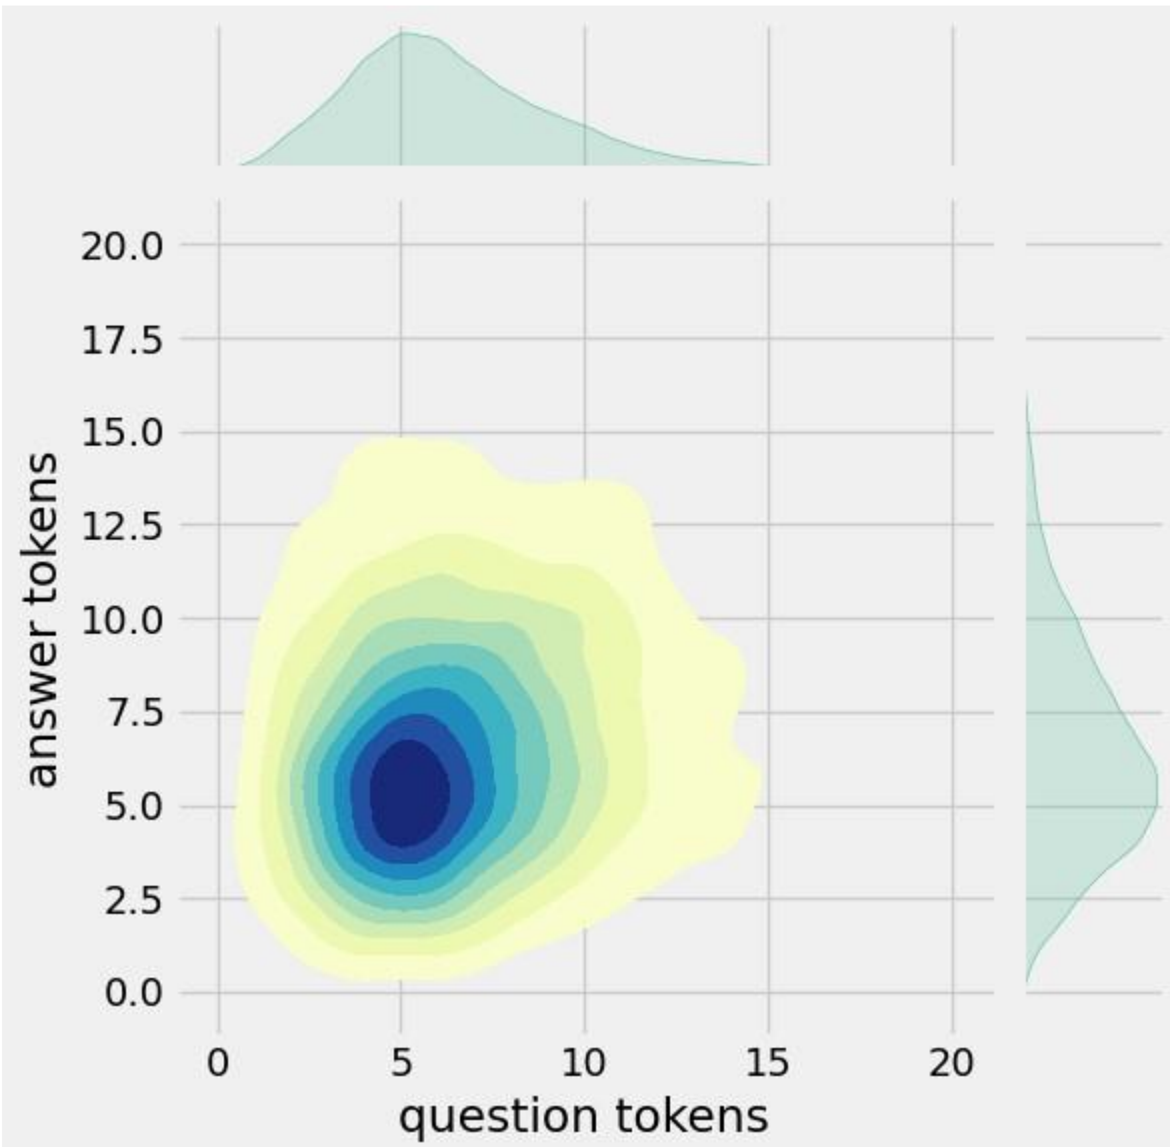
sns.set_palette('Set2') sns.histplot(x=df['question tokens'],data=df,kde=True,ax=ax[0])

sns.histplot(x=df['answer tokens'],data=df,kde=True,ax=ax[1])

sns.jointplot(x='question tokens',y='answer tokens',data=df,kind='kde',fill=True,cmap='YlGnBu')

plt.show()
```





5.Text Cleaning:

The below code segment is focused on text cleaning and preparing the data for a chatbot training or conversation model. It performs several text cleaning and transformation operations on the given dataset, resulting in encoder and decoder inputs, along with decoder targets. Here's a description of what each part of the code does:

In [4]:

```
def clean_text(text):
    text=re.sub('-',' ',text.lower())     text=re.sub('[.]',' . ',text)     text=re.sub('[1]',' 1
',text)     text=re.sub('[2]',' 2 ',text)     text=re.sub('[3]',' 3 ',text)     text=re.sub('[4]','
4 ',text)     text=re.sub('[5]',' 5 ',text)     text=re.sub('[6]',' 6 ',text)
text=re.sub('[7]',' 7 ',text)     text=re.sub('[8]',' 8 ',text)     text=re.sub('[9]',' 9 ',text)
text=re.sub('[0]',' 0 ',text)     text=re.sub('[,]',' , ',text)     text=re.sub('[?]',' ? ',text)
text=re.sub('[!]',' ! ',text)     text=re.sub('[$]',' $ ',text)     text=re.sub('[&]',' & ',text)
text=re.sub('[/]',' / ',text)     text=re.sub('[:]',' : ',text)     text=re.sub('[;]',' ; ',text)
text=re.sub('[*]',' * ',text)     text=re.sub('[\']',' \' ',text)     text=re.sub('[\"]',' \"
',text)     text=re.sub('\t',' ',text)     return text

df.drop(columns=['answer tokens','question tokens'],axis=1,inplace=True)
df['encoder_inputs']=df['question'].apply(clean_text)
df['decoder_targets']=df['answer'].apply(clean_text)+' <end>'
df['decoder_inputs']='<start> '+df['answer'].apply(clean_text)+' <end>'

df.head(10)
```

Out[4]:

	question	answer	encoder_inputs	decoder_targets	decoder_inputs
0	hi, how are you doing?	i'm fine. how about yourself?	hi , how are you doing ?	i ' m fine . how about yourself ? <end>	<start> i ' m fine . how about yourself ? <end>

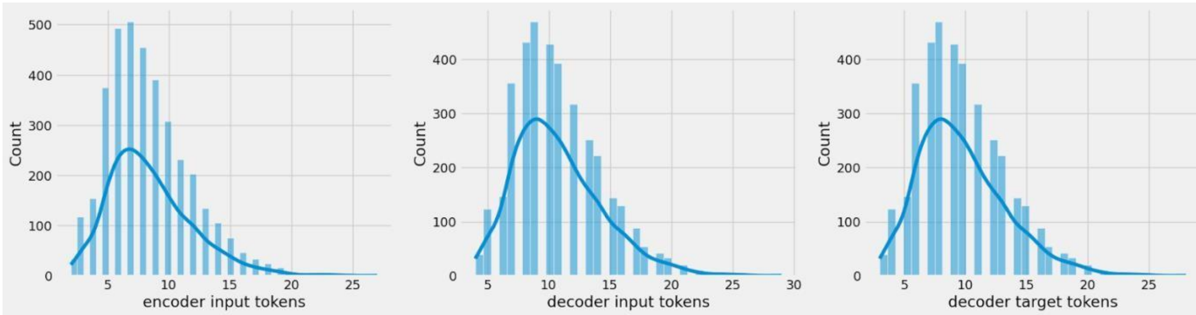
9	it's okay. it's a really big campus.	good luck with school.	it ' s okay . it ' s a really big campus .	good luck with school . <end>	<start> good luck with school . <end>

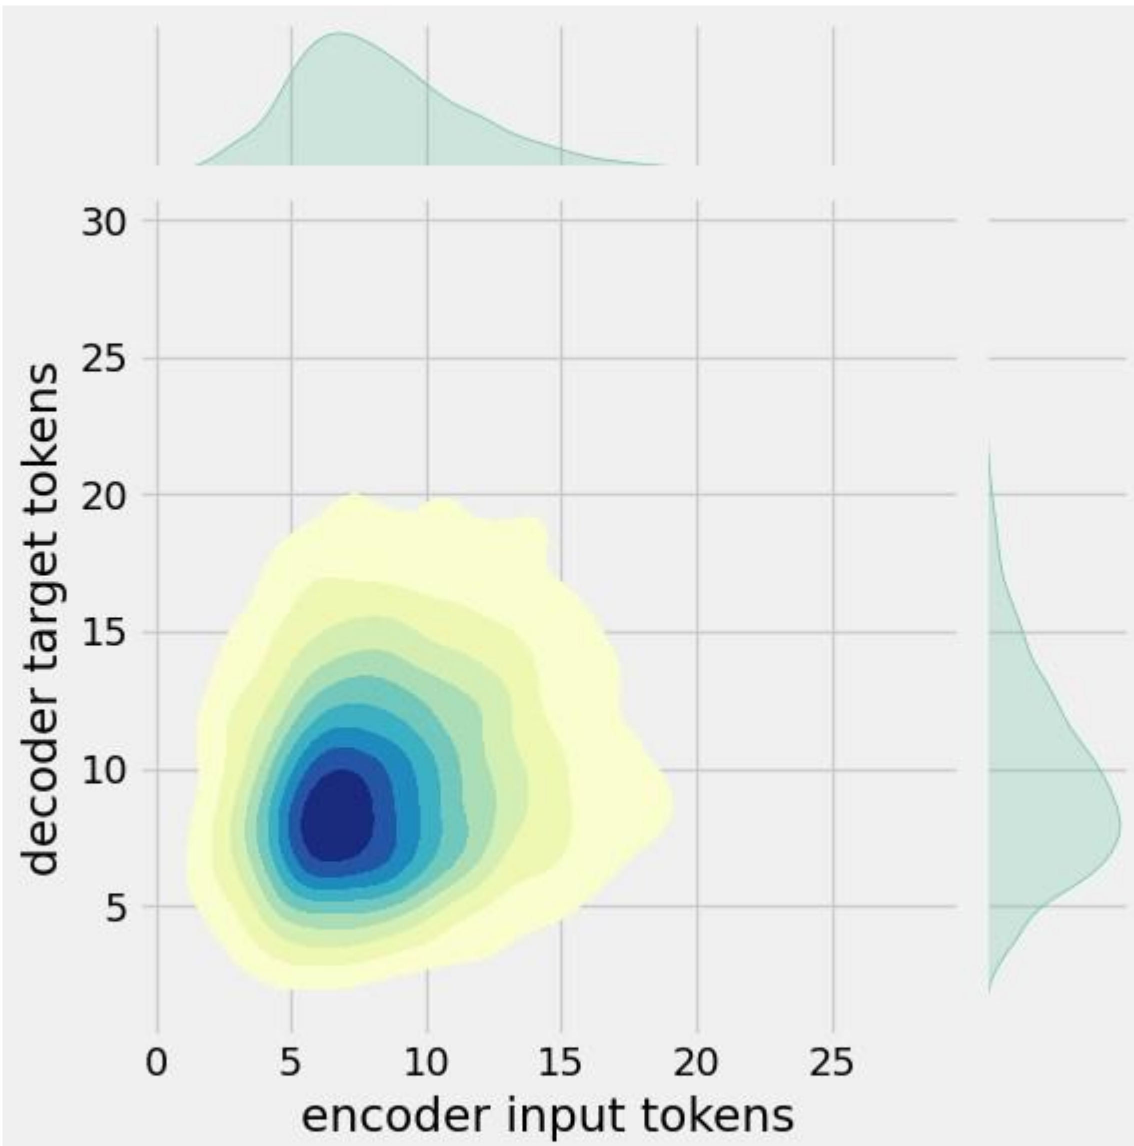
Token Count Analysis and Distribution Visualization

The below code segment extends the data analysis and visualization for the dataset used for training or evaluating a chatbot or conversation model. It calculates the token counts for the encoder inputs, decoder inputs, and decoder targets, and then visualizes the distributions of these token counts. Here's a description of what each part of the code does:

In [5]:

```
df['encoder input tokens']=df['encoder_inputs'].apply(lambda x:len(x.split())) df['decoder input tokens']=df['decoder_inputs'].apply(lambda x:len(x.split()))
df['decoder target tokens']=df['decoder_targets'].apply(lambda x:len(x.split()))
plt.style.use('fivethirtyeight') fig,ax=plt.subplots(nrows=1,ncols=3,figsize=(20,5)) sns.set_palette('Set2')
sns.histplot(x=df['encoder input tokens'],data=df,kde=True,ax=ax[0]) sns.histplot(x=df['decoder input tokens'],data=df,kde=True,ax=ax[1]) sns.histplot(x=df['decoder target tokens'],data=df,kde=True,ax=ax[2])
sns.jointplot(x='encoder input tokens',y='decoder target tokens',data=df,kind='kde',fill=True,cmap='YlGnBu')
plt.show()
```





Post-Preprocessing Data Summary and Configuration

The below code segment provides a summary and configuration details after preprocessing the data. It also drops some unnecessary columns and sets parameters for further processing.

Program: **In[6]:**

```
print(f"After preprocessing: {' '.join(df[df['encoder input tokens'].max()==df['encoder input tokens']]['encoder_inputs'].values.tolist())}") print(f"Max encoder input length: {df['encoder input tokens'].max()}") print(f"Max decoder input length: {df['decoder input tokens'].max()}") print(f"Max decoder target length: {df['decoder target tokens'].max()}")

df.drop(columns=['question','answer','encoder input tokens','decoder input tokens','decoder target tokens'],axis=1,inplace=True) params={
  "vocab_size":2500,
  "max_sequence_length":30,
  "learning_rate":0.008,
  "batch_size":149,
  "lstm_cells":256,
  "embedding_dim":256,    "buffer_size":10000
}
learning_rate=params['learning_rate'] batch_size=params['batch_size']
embedding_dim=params['embedding_dim'] lstm_cells=params['lstm_cells']
vocab_size=params['vocab_size'] buffer_size=params['buffer_size']
max_sequence_length=params['max_sequence_length'] df.head(10)
```

After preprocessing: for example , if your birth date is january 1 2 , 1 9 8 7 , write 0 1 / 1 2 / 8 7 .

Max encoder input length: 27

Max decoder input length: 29

Max decoder target length: 28

Out[6]:

	encoder_inputs	decoder_targets	decoder_inputs
0	hi , how are you doing ?	i ' m fine . how about yourself ? <end>	<start> i ' m fine . how about yourself ? <end>

1	i ' m fine . how about yourself ?	i ' m pretty good . thanks for asking . <end>	<start> i ' m pretty good . thanks for asking...
2	i ' m pretty good . thanks for asking .	no problem . so how have you been ? <end>	<start> no problem . so how have you been ? ...
3	no problem . so how have you been	i ' ve been great . what about you ?	<start> i ' ve been great . what about you

	encoder_inputs	decoder_targets	decoder_inputs

9	it ' s okay . it ' s a really big campus .	good luck with school . <end>	<start> good luck with school . <end>

Tokenization

Text Vectorization and Vocabulary Generation

This code segment is responsible for text vectorization and vocabulary generation, which are crucial steps in preparing text data for machine learning or deep learning models. Ln[7]:

```
vectorize_layer=TextVectorization(    max_tokens=vocab_size,
standardize=None,    output_mode='int',
output_sequence_length=max_sequence_length
)
vectorize_layer.adapt(df['encoder_inputs']+' '+df['decoder_targets']+'
<start> <end>')
vocab_size=len(vectorize_layer.get_vocabulary()) print(f'Vocab size:
{len(vectorize_layer.get_vocabulary())}')
print(f'{vectorize_layer.get_vocabulary()[:12]}')
```

```
Vocab size: 2443

['', '[UNK]', '<end>', '.', '<start>', "'", 'i', '?', 'you', ',', 'the',
```

'to']

Sequence to ID Conversion and Data Shapes

The below code segment is primarily focused on the conversion of text sequences into numerical IDs using the previously created text vectorization layer. It also provides information about the shapes of the resulting data arrays.

In [8]:

```
def sequences2ids(sequence):
   return vectorize_layer(sequence)

def ids2sequences(ids):
   decode=''     if type(ids)==int:
      ids=[ids]     for id in ids:        decode+=vectorize_layer.get_vocabulary()[id]+' '
return decode

x=sequences2ids(df['encoder_inputs']) yd=sequences2ids(df['decoder_inputs'])
y=sequences2ids(df['decoder_targets'])

print(f'Question sentence: hi , how are you ?') print(f'Question to tokens: {sequences2ids("hi , how are
you ?")[:10]}') print(f'Encoder input shape: {x.shape}') print(f'Decoder input shape: {yd.shape}')
print(f'Decoder target shape: {y.shape}')
```

Question sentence: hi , how are you ?

Question to tokens: [1971   9   45   24   8   7   0   0   0   0]

Encoder input shape: (3725, 30)

Decoder input shape: (3725, 30)

Decoder target shape: (3725, 30)

Sample Encoder and Decoder Inputs and Targets

The below code segment provides a preview of the numerical sequences for encoder inputs, decoder inputs, and decoder targets for a specific data example. Here's an explanation of what each part of the code does:

In[9]:

```
print(f'Encoder input: {x[0][:12]} ...') print(f'Decoder input: {yd[0][:12]} ...')   # shifted by one
time step of the target as input to decoder is the output of the previous
timestep print(f'Decoder target: {y[0][:12]} ...')
```

Encoder input:

[1971   9   45   24   8 194   7   0   0   0   0   0] ...

Decoder input: [4   6   5 38 646   3 45 41 563   7   2   0] ...

Decoder target: [6   5 38 646   3 45 41 563   7   2   0   0] ...

Data Preprocessing and Batching for Training and Validation

The below code segment focuses on preparing and organizing the data for training and validation of a machine learning model, particularly for sequence-to-sequence tasks such as chatbots or language translation. Here's a description of what each part of the code does:

In [10]:

```
data=tf.data.Dataset.from_tensor_slices((x,yd,y)) data=data.shuffle(buffer_size)

train_data=data.take(int(.9*len(data))) train_data=train_data.cache()
train_data=train_data.shuffle(buffer_size) train_data=train_data.batch(batch_size)
train_data=train_data.prefetch(tf.data.AUTOTUNE)
train_data_iterator=train_data.as_numpy_iterator()

val_data=data.skip(int(.9*len(data))).take(int(.1*len(data))) val_data=val_data.batch(batch_size)
val_data=val_data.prefetch(tf.data.AUTOTUNE)

_=train_data_iterator.next()
print(f'Number of train batches: {len(train_data)}') print(f'Number of training data:
{len(train_data)*batch_size}') print(f'Number of validation batches: {len(val_data)}')
print(f'Number of validation data: {len(val_data)*batch_size}') print(f'Encoder Input shape (with
batches): {_[0].shape}') print(f'Decoder Input shape (with batches): {_[1].shape}') print(f'Target
Output shape (with batches): {_[2].shape}')
```

Number of train batches: 23

Number of training data: 3427

Number of validation batches: 3

Number of validation data: 447

Encoder Input shape (with batches): (149, 30)

Decoder Input shape (with batches): (149, 30)

Target Output shape (with batches): (149, 30)

6.Build Models

Model building in the context of machine learning and deep learning involves the creation and training of algorithms or neural networks to perform specific tasks. It's a fundamental step in the development of predictive models, classifiers, or any system designed to make intelligent decisions or predictions based on data.

Build Encoder

The below code defines the encoder component of a sequence-to-sequence model, typically used in tasks like chatbots or machine translation. Below is a description of the key components and actions in this code:

In [ ]:

In [11]:

```
class Encoder(tf.keras.models.Model):     def __init__(self,units,embedding_dim,vocab_size,*args,**kwargs) -> None:
      super().__init__(*args,**kwargs)        self.units=units        self.vocab_size=vocab_size
self.embedding_dim=embedding_dim        self.embedding=Embedding(           vocab_size,
embedding_dim,           name='encoder_embedding',           mask_zero=True,
embeddings_initializer=tf.keras.initializers.GlorotNormal()
      )
      self.normalize=LayerNormalization()        self.lstm=LSTM(           units,           dropout=.4,
return_state=True,           return_sequences=True,           name='encoder_lstm',
kernel_initializer=tf.keras.initializers.GlorotNormal()        )        def call(self,encoder_inputs):
self.inputs=encoder_inputs        x=self.embedding(encoder_inputs)        x=self.normalize(x)
x=Dropout(.4)(x)        encoder_outputs,encoder_state_h,encoder_state_c=self.lstm(x)
self.outputs=[encoder_state_h,encoder_state_c]        return encoder_state_h,encoder_state_c

encoder=Encoder(lstm_cells,embedding_dim,vocab_size,name='encoder') encoder.call(_[0])
```

Out[11]:

```
(<tf.Tensor: shape=(149, 256), dtype=float32, numpy=

```

Build Encoder## Build Decoder

The below code provided defines the structure of a Decoder model used in a sequence-to-sequence neural network. This type of architecture is commonly used in tasks like machine translation, text summarization, and chatbot development.

In [12]:

```
class Decoder(tf.keras.models.Model):     def __init__(self,units,embedding_dim,vocab_size,*args,**kwargs) -> None:
        super().__init__(*args,**kwargs)        self.units=units
self.embedding_dim=embedding_dim        self.vocab_size=vocab_size
self.embedding=Embedding(            vocab_size,            embedding_dim,
name='decoder_embedding',            mask_zero=True,
embeddings_initializer=tf.keras.initializers.HeNormal()
        )
        self.normalize=LayerNormalization()        self.lstm=LSTM(            units,
dropout=.4,            return_state=True,            return_sequences=True,
name='decoder_lstm',            kernel_initializer=tf.keras.initializers.HeNormal()
        )        self.fc=Dense(            vocab_size,            activation='softmax',
name='decoder_dense',            kernel_initializer=tf.keras.initializers.HeNormal()        )
def call(self,decoder_inputs,encoder_states):        x=self.embedding(decoder_inputs)
x=self.normalize(x)        x=Dropout(.4)(x)
x,decoder_state_h,decoder_state_c=self.lstm(x,initial_state=encoder_s tates)
        x=self.normalize(x)        x=Dropout(.4)(x)
        return self.fc(x)

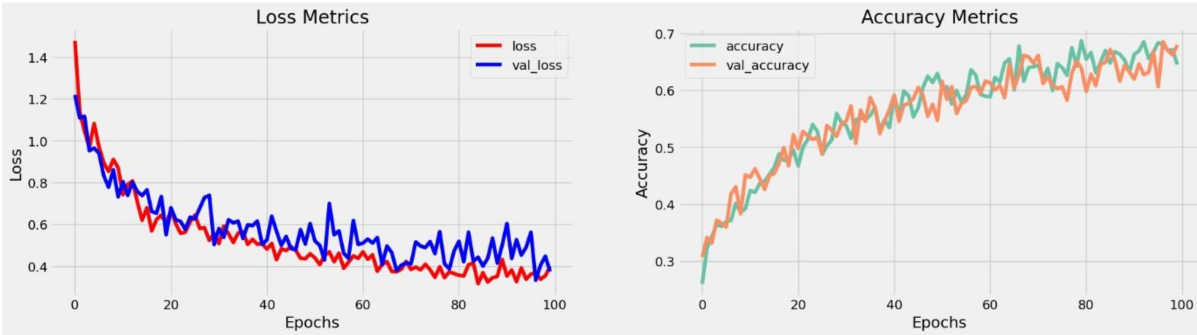
8.Visualize Metrics

Visualization of Training Metrics for Loss and Accuracy:

The following code is used to create a visual representation of training metrics for a machine learning model. Specifically, it visualizes two important metrics, namely "Loss" and "Accuracy," over the course of training, typically for a neural network.

In [16]:

```
fig,ax=plt.subplots(nrows=1,ncols=2,figsize=(20,5))
ax[0].plot(history.history['loss'],label='loss',c='red')
ax[0].plot(history.history['val_loss'],label='val_loss',c = 'blue') ax[0].set_xlabel('Epochs')
ax[1].set_xlabel('Epochs') ax[0].set_ylabel('Loss') ax[1].set_ylabel('Accuracy') ax[0].set_title('Loss
Metrics') ax[1].set_title('Accuracy Metrics')
ax[1].plot(history.history['accuracy'],label='accuracy')
ax[1].plot(history.history['val_accuracy'],label='val_accuracy') ax[0].legend() ax[1].legend()
plt.show()
```



9.Save Model

The provided code relates to saving and examining the layers of a machine learning model, presumably a neural network. Let's break down what this code accomplishes:

In [17]:

```
model.load_weights('ckpt') model.save('models',save_format='tf')
```

In [18]:

```
for idx,i in enumerate(model.layers):
    print('Encoder layers:' if idx==0 else 'Decoder layers: ')     for j in i.layers:
        print(j)     print('---------------------') Encoder layers:
<keras.layers.core.embedding.Embedding object at 0x782084b9d190>
<keras.layers.normalization.layer_normalization.LayerNormalization object at 0x7820e56f1b90>

<keras.layers.rnn.lstm.LSTM object at 0x7820841bd650> ---------------------
Decoder layers:

<keras.layers.core.embedding.Embedding object at 0x78207c258590>
<keras.layers.normalization.layer_normalization.LayerNormalization object at 0x78207c78bd10>

<keras.layers.rnn.lstm.LSTM object at 0x78207c258a10>

<keras.layers.core.dense.Dense object at 0x78207c2636d0>

---------------------
```

10.Create Inference Model

The code given below defines a custom chatbot model using TensorFlow/Keras, and it includes visualization of the model architecture using `tf.keras.utils.plot_` `ln[19]:`

```
class ChatBot(tf.keras.models.Model):     def
__init__(self,base_encoder,base_decoder,*args,**kwargs):
        super().__init__(*args,**kwargs)
self.encoder,self.decoder=self.build_inference_model(base_encoder,bas e_decoder)

    def build_inference_model(self,base_encoder,base_decoder):
        encoder_inputs=tf.keras.Input(shape=(None,))         x=base_encoder.layers[0](encoder_inputs)
x=base_encoder.layers[1](x)
        x,encoder_state_h,encoder_state_c=base_encoder.layers[2](x)
encoder=tf.keras.models.Model(inputs=encoder_inputs,outputs=[encoder_
state_h,encoder_state_c],name='chatbot_encoder')

        decoder_input_state_h=tf.keras.Input(shape=(lstm_cells,))
```

```
        decoder_input_state_c=tf.keras.Input(shape=(lstm_cells,))
decoder_inputs=tf.keras.Input(shape=(None,))        x=base_decoder.layers[0](decoder_inputs)
x=base_encoder.layers[1](x)        x,decoder_state_h,decoder_state_c=base_decoder.layers[2](x,initial_st
ate=[decoder_input_state_h,decoder_input_state_c])        decoder_outputs=base_decoder.layers[-1](x)
decoder=tf.keras.models.Model(
inputs=[decoder_inputs,[decoder_input_state_h,decoder_input_state
_c]],        outputs=[decoder_outputs,[decoder_state_h,decoder_state_c]],name= 'chatbot_decoder'        )
        return encoder,decoder

    def summary(self):
        self.encoder.summary()        self.decoder.summary()

    def softmax(self,z):
        return np.exp(z)/sum(np.exp(z))

    def sample(self,conditional_probability,temperature=0.5):
        conditional_probability =
np.asarray(conditional_probability).astype("float64")        conditional_probability =
np.log(conditional_probability) / temperature
        reweighted_conditional_probability = self.softmax(conditional_probability)        probas =
np.random.multinomial(1, reweighted_conditional_probability,
1)
        return np.argmax(probas)

    def preprocess(self,text):        text=clean_text(text)
seq=np.zeros((1,max_sequence_length),dtype=np.int32)        for i,word in
enumerate(text.split()):
            seq[:,i]=sequences2ids(word).numpy()[0]        return seq
     def postprocess(self,text):
        text=re.sub(' - ','-',text.lower())        text=re.sub(' [.] ','. ',text)
text=re.sub(' [1] ','1',text)        text=re.sub(' [2] ','2',text)
text=re.sub(' [3] ','3',text)        text=re.sub(' [4] ','4',text)
text=re.sub(' [5] ','5',text)        text=re.sub(' [6] ','6',text)
text=re.sub(' [7] ','7',text)        text=re.sub(' [8] ','8',text)
text=re.sub(' [9] ','9',text)        text=re.sub(' [0] ','0',text)
text=re.sub(' [,] ',', ',text)        text=re.sub(' [?] ','? ',text)
text=re.sub(' [!] ','! ',text)        text=re.sub(' [$] ','$ ',text)
text=re.sub(' [&] ','& ',text)        text=re.sub(' [/] ','/ ',text)
text=re.sub(' [:] ',': ',text)        text=re.sub(' [;] ','; ',text)
text=re.sub(' [*] ','* ',text)        text=re.sub(' [\' ] ','\' ',text)
text=re.sub(' [\"] ','\"',text)        return text

    def call(self,text,config=None):        input_seq=self.preprocess(text)
states=self.encoder(input_seq,training=False)        target_seq=np.zeros((1,1))
target_seq[:,:]=sequences2ids(['<start>']).numpy()[0][0]        stop_condition=False
decoded=[]        while not stop_condition:
            decoder_outputs,new_states=self.decoder([target_seq,states],train ing=False)
#                index=tf.argmax(decoder_outputs[:,-1,:],axis=-
1).numpy().item()        index=self.sample(decoder_outputs[0,0,:]).item()
word=ids2sequences([index])        if word=='<end> ' or len(decoded)>=max_sequence_length:
```

stop_condition=True else:
decoded.append(index) target_seq=np.zeros((1,1))
target_seq[:,:]=index states=new_states return
self.postprocess(ids2sequences(decoded))

11.Time to Chat

"Time to chat" means the moment when the bot is ready to engage in a conversation with the user.

In [22]:

```
def print_conversation(texts):     for text in
texts:
       print(f'You: {text}')        print(f'Bot:
{chatbot(text)}')
print('========================')
```

In [23]: print_conversation([

```
'hi',
'do yo know me?',
'what is your name?',
'you are bot?',
'hi, how are you doing?',
"i'm pretty good. thanks for asking.",
"Don't ever be in a hurry",
'''I'm gonna put some dirt in your eye ''',
'''You're trash ''',
'''I've read all your research on nano-technology ''',
'''You want forgiveness? Get religion''',
'''While you're using the bathroom, i'll order some food.''',
'''Wow! that's terrible.''',
'''We'll be here forever.''',
'''I need something that's reliable.''',
'''A speeding car ran a red light, killing the girl.''',
'''Tomorrow we'll have rice and fish for lunch.''',
'''I like this restaurant because they give you free bread.''' ])
```

You: hi

Bot: i have to go to the bathroom.
======================== You: do you know me?

Bot: yes, it's too close to the other.
======================== You: what is your name?

Bot: i have to walk the house.
======================== You: you are bot?

Bot: no, i have. all my life. ========================

You: hi, how are you doing?

Bot: i'm going to be a teacher.

========================

You: i'm pretty good. thanks for asking.

Bot: no problem. i'll have to give you the english assignments from my mind.

========================

You: Don't ever be in a hurry Bot: it's not a great. ========================

You: I'm gonna put some dirt in your eye Bot: that's a good idea.

========================

You: You're trash

Bot: the tv news is reporting a bank robbery.

========================

You: I've read all your research on nano-technology Bot: it's the weather. i've gone around the world.

========================

You: You want forgiveness? Get religion Bot: no, i'll be my.

========================

You: While you're using the bathroom, i'll order some food. Bot: don't order for me. i've been a cheater. ========================

You: Wow! that's terrible.

Bot: never park your car under the house. ========================

You: We'll be here forever.

Bot: we'll be there in half an hour.

========================

You: I need something that's reliable.

Bot: you need a car with low mileage.

========================

You: A speeding car ran a red light, killing the girl.

Bot: what happened?

========================

You: Tomorrow we'll have rice and fish for lunch.

Bot: i'll make a sandwich.

========================

You: I like this restaurant because they give you free bread. Bot: well, i think that's a good idea.

Conclusion:

The data preparation and preprocessing steps in the development of our Python chatbot are essential for creating a robust and effective conversational AI system. Throughout this phase, we've focused on several crucial tasks, such as cleaning and structuring textual data, tokenizing text, handling special characters, and preparing training data
